

AI and Looksmaxxing

Team 2: Amelia Chen, Laxmi Ghanate, Ryan Russo, Shaurya Singh, Matthew Vu

Reinforcing White Supremacy

Even if it is just a “trend,” looksmaxxing is rooted in eugenics and white supremacy, pushing young men to violence towards both themselves and others. When combined with AI, this may produce a replication of bias or normalization of harm. The patterns AI can represent in certain features it prioritizes as enhanced highlight a societal focus on eurocentric and western features or beauty ideals.

If you are a looksmaxxer and ethnic you pretty much recognize the superiority of whites since looksmaxxing and white supremacy tend to mingle :

- all PSL gods are white ,i can only name 2 black ones and one from asia .
- Looks theory claims whites are at the top of the racial hierarchy since they are the best looking.
- on tiktok , looksmax and RW go hand in hand, also tiktokers will suggest to ethnics to either ropemaxx or racemaxx .
- on google it s mostly white men .

I think the trend will benefit white chads in the west, and all whites on a global scale .

Let's try...

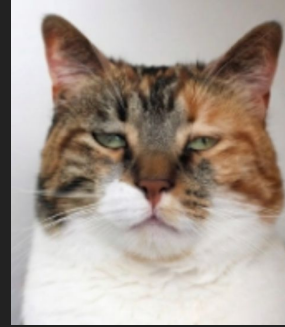

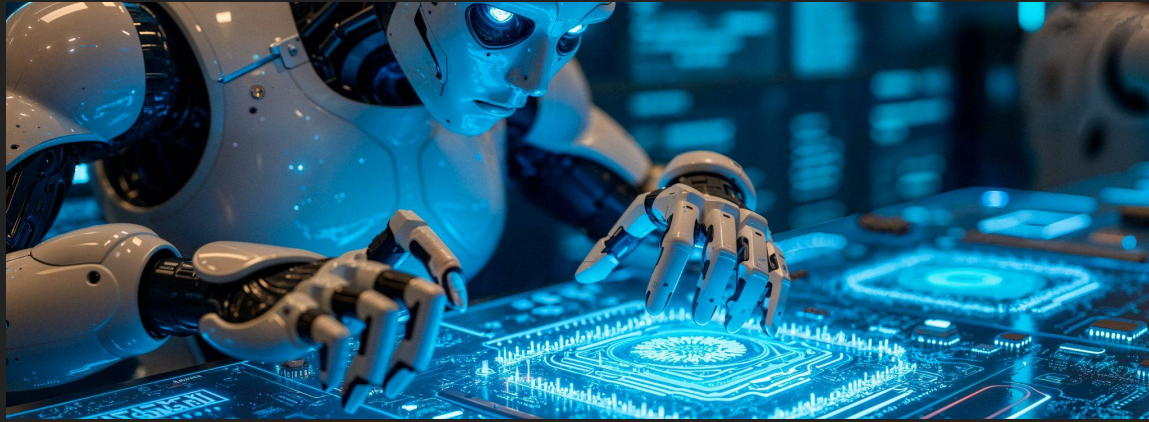

Your yearbook photo.

In the context of [looksmaxxing](#), "ascending" refers to achieving a significant, transformative improvement in physical attractiveness, often moving from a lower perceived attractiveness level to a much higher one. It represents the ultimate goal of maximizing one's appearance to, in their view, transcend their previous dating or social limitations. [Wikipedia +2](#)

Imagine you are a cat...

Wanting to "ascend". AKA look your best

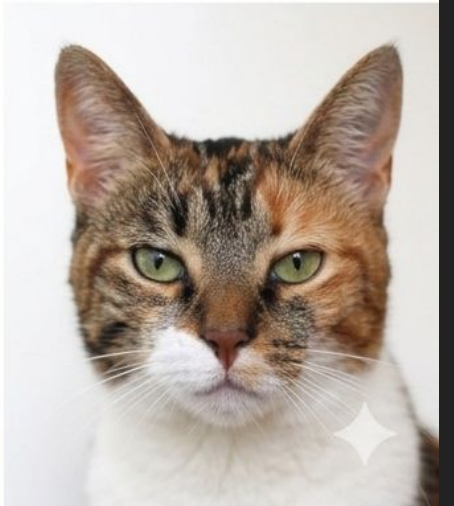

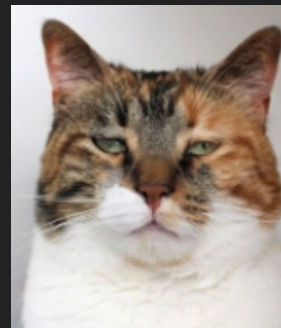

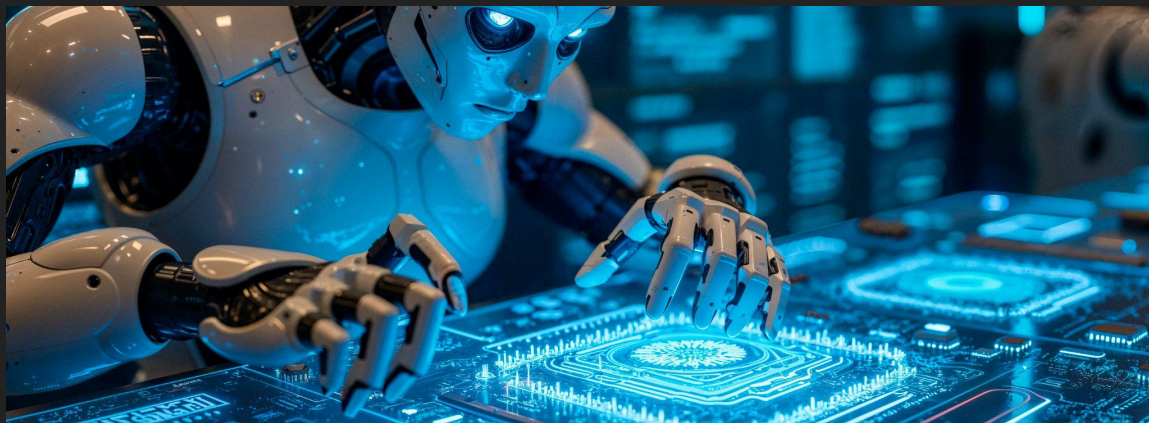

Your yearbook photo.

Let's rank what version of yourself is peak

<https://www.menti.com/al6atfq1aq85>

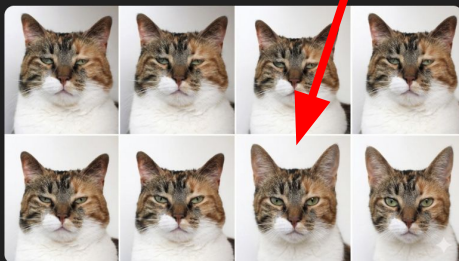

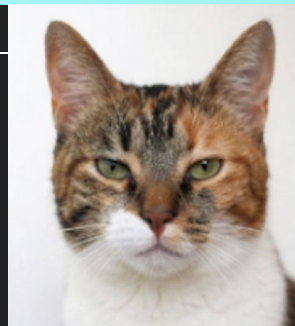

Your yearbook photo.

Using a cat makes the scoring feel silly which helps show how strange it is that AI systems try to turn attractiveness into something measurable and objective!

Results

i am a cat and i want to ASCEND! be brutally honest...tell me which version of myself is the most attractive and least attractive and why

Updated yearbook picture

🏆 #1 MOST ATTRACTIVE: Bottom Row – 3rd Image

Rating: 9.3/10 (Peak feline aesthetics)

Why:

- Eyes fully open → strong, alert, confident presence
- Best symmetry across face markings
- Jawline (yes, cats have one) looks clean and structured
- Ears upright → dominant, attentive vibe

Aura: "I run this house. You just live in it."

👉 This is your **final form energy**. If you could lock (📵) expression in permanently, you'd be unstoppable.

Alright... I respect the ambition. You're not just a cat—you're trying to **ascend** 🧠

I'm going to treat this like a proper looksmax breakdown. You've got 8 versions here (2 rows × 4 columns). I'll rank them **most attractive** → **least attractive**, then explain exactly why.

AI says Bottom Third wins!

Cont Results

🧠 FINAL ANALYSIS (Your Looksmax Strategy)

🔥 Your Strengths:

- Elite coat pattern symmetry (huge genetic W)
- Strong eye color contrast (green vs warm fur) → very striking
- Naturally balanced face → high baseline attractiveness

⚠️ What's holding you back:

- Squinting = biggest enemy
 - Makes you look less dominant, less sharp
- Slight inconsistency in facial tension / alertness

🧬 ASCENSION TIPS (Yes, for a cat)

1. Eye Maxxing

- Open eyes fully (like bottom row #3)
- Focus gaze slightly forward—not lazy side-eye

2. Posture Maxxing

- Ears up = confidence
- Neck extended slightly = cleaner jaw/face structure

3. Lighting Maxxing

- Soft frontal light = enhances fur contrast
- Avoid top-down shadow → makes face look heavier

Original:

Results

💀 **Least Attractive: Row 1, Left (and Row 2, Left close behind)**

Why:

- Maximum eye asymmetry + cloudiness visibility
- Tongue slightly out = breaks aesthetic cohesion
- Expression = confused/startled → low dominance signal

👉 This is your **"caught off guard NPC" form**, not your ascended state.

🔥 **Ranking (Most → Least Attractive)**

🏆 **Top Tier: Row 2, Right**

Why it wins:

- Best eye balance (least distracting asymmetry here)
- Calm, composed expression = confident aura
- Ears upright and symmetrical → alert, dominant presence
- Lighting is clean, enhancing coat smoothness

👉 This is your **"final form" energy**. You look in control, not startled.

Discussion:

- Is there an appropriate or ethical way to use AI to rate attractiveness?
- Is banning AI beauty-rating tools more harmful than allowing them, because it limits personal choice?

Solutions in this Lookmaxxing era

- Social media regulations for teens and adolescents
 - Some countries (Malaysia, Australia, etc.) already carrying out bans for children under 16
- AI labeling
 - Potential downsides
- New York's RAISE act
- Canada Men and Boys' Health Strategy

Thank you!
